

Invasive Species

An invasive species is a non-native species which successfully reproduces and thrives in their new environment while outcompeting native species. Invasives are one of the leading causes of species endangerment and can devastate the ecosystem.

How to Deal with Invasive Species

Avoid Introduction

Plant native plants in your garden. Do not dispose of potential invasives in the compost, find proper disposal techniques.

Report Sightings

In order to remove invasives, we must know where we can find them, report any potential sightings to the Invasive Species Council.

Manage Appropriately

Simply cutting down invasives may not be effective at removing them, for proper management techniques check out the PEI Invasive Species Council.
